Structural Engineering Over 40 Years – Things I Have Seen and Learned. (1.5 PDH)

Presenter: Steve Schaefer, P.E.

This month SEAoO brings you a synopsis of common things Structural Engineers should be aware of and address garnered over the last 40 years by first-hand experience. Mr. Schaefer will be describing recurring problems and show how to correct them or design to avoid them. Topics include:

Construction adjacent to existing structures
Lateral support for basement walls
Wood framing issues

Firewalls
Steel framing
Heavy timber
Existing buildings

If you have a specific topic that you have encountered and would like to share, please contact Steve ahead of the meeting so he can prepare something to address your issue.

Steve Schaefer, P.E. is a local SEAoO member and founder Steven Schaefer Associates Inc., consulting structural engineers. The firm has grown from a staff of 1 in 1976 to over 50. Steve was awarded the 2007 Distinguished Alumni Award from the University of Cincinnati, College of Engineering and the 2009 Presidential Lifetime Achievement Award from the Cincinnati Section of ASCE. Steve volunteers his time to make cursory review of plans for the Hamilton County Building Department and heads up the SEAoO Committee on professional competency. This SEAoO group is interested in evaluating the quality of Structural Engineer work in Ohio, and how this might affect our State's stance on separate licensure for Structural Engineers (SE). If time permits Mr. Schaefer will give us an update on the plan review project.
